

IMAGINE CUTTING EDGE SECURITY TECHNOLOGY THAT WILL "Wow" VISITORS

**Enhance security and lower costs with
our virtual interactive solutions**

ABOUT VISS TECHNOLOGIES

With more than 30 years of dedicated security experience, VISS Technologies is an expert at identifying the critical needs and challenges of different properties. We are the leader and trusted choice for providing a level of security second to none and enhancing safety, while increasing your property's value. No other security company has more expertise or experience. VISS Technologies is your one-source provider to meet the unique security needs of today's properties.

IS YOUR PROPERTY SECURE AND DO EMPLOYEES AND VISITORS FEEL SAFE?

VISS Technologies consolidates cutting-edge security advancements into a seamless, intelligent, and interactive solution. By unifying intrusion detection, access control, and high-definition video analytics, we deliver a high-impact platform that optimizes operational efficiency and reduces administrative overhead. Unlike legacy passive security, our interactive systems provide an elite level of management and oversight. With VISS, you can rest assured that your assets are protected by the industry's most advanced innovations, engineered to address the complex security challenges of today and the future.

SECURITY CONSULTING AND DESIGN

VISS Technologies takes great pride in the evaluation, design, installation and maintenance of your security system. First, we will meet with you to discuss your needs and develop a specific solution that will surpass your expectations. We then focus on the design of security solutions that are compliant with regulations and consider your buildings' specific activities and needs.

At the same time, we consider the impact of security and whether we can help realize low cost opportunities by taking advantage of as much of the existing infrastructure and legacy systems as possible while still achieving the highest security levels.

PREVENT CRIMINAL ACTIVITY BEFORE IT HAPPENS

Imagine a video system that doesn't just record but detects and reacts. Events are triggered mainly by intelligent analytics (such as motion detection) and digital inputs (such as a door opening). We then automatically analyze these events, notifying you, security or our monitoring command center of incidents for immediate response. A guard watching multiple video cameras might miss an incident, but our video analytic system will pick it up. When a video alarm is triggered at our interactive command center one of our fully trained security analysts will notify the police while turning on warning lights, a siren and perform a voice down. Using our advanced video analytics, we can prevent criminal activity before it happens.

MONITORING YOUR BUILDING 24/7

VISS Technologies has the most comprehensive and technologically advanced UL monitoring command center available today. You can relax knowing we go above and beyond the highest standards in the security industry, making sure that your property is monitored by our trained security analysts 24 hours a day, 365 days a year.

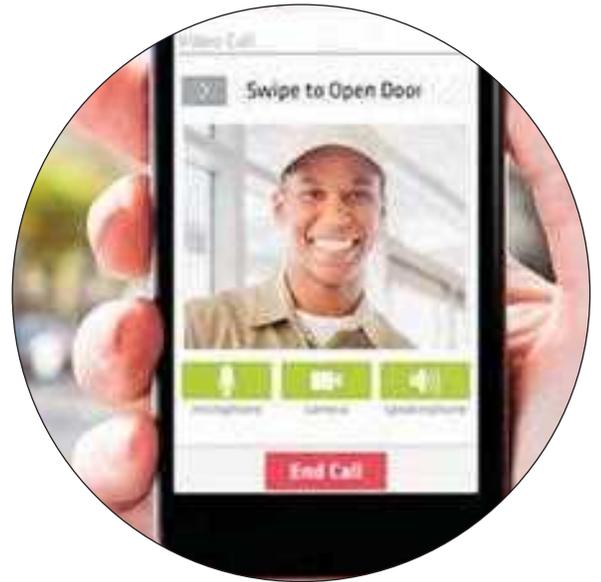

EASY VISITOR REGISTRATION

Imagine an access control system that automates the entire process of registering a visitor. Quickly register a visitor, capture detailed information, print a badge and notify the resident. Looking up an existing visitor is just as easy as using a variety of simple categories such as time of visit. Visitor pre-registration and visitor self-registration are also available. Our visitor registration integrates with both video and access systems, which ensures security and reliability.

YOUR SMARTPHONE IS YOUR VIDEO INTERCOM

Imagine seeing who is at the door and even being able to let them in with the push of a button. An employee's or visitor's smartphone can even serve as a video intercom. But that's not all. The app records every visitor with cloud-based data storage for one year, allows the administration to receive email and text messages, offers integration with other software and provides Plug N' Play installation. There is no problem even if you don't have your phone with you. Administration or our monitoring center can still receive a phone call to open the door.

MANAGED ACCESS CONTROL

VISS Technologies provides scalable access control solutions to precisely manage community entry for staff and visitors. Whether you prefer a self-managed interface or our fully managed service, you retain total control over permissions based on location, time, and user criteria. Our systems support modern mobile credentials as well as personalized, branded physical badges. With our managed solution, you enjoy the benefits of a high-tier system without the administrative burden or maintenance costs. Our cloud-based architecture ensures you can monitor activity and update credentials instantly from virtually anywhere.

SECURE PARKING

Imagine employees and visitors entering the parking garage without needing a card. Our system combines license plate recognition with RFID to detect, recognize and register license plates. In addition, the system offers quick and convenient registered license plates search, software camera position adjustment, lighting condition adaptive algorithm, support for local and remote unlimited "White" and "Black" lists and an interface to external applications and devices

ELEVATOR CONTROL

Imagine not only controlling access to doors but access to floors as well. Elevator integration links our elevator control system with our access control system to increase building security and improve the flow of people. Through this integration, clearances can be set to either grant or deny individual access to certain destinations. It also allows people access to certain floors within a scheduled time frame.

YOUR PROPERTY'S SECURITY FUTURE -- TODAY!

Now imagine your community property's future – today - with VISS Technologies. We're just touching the tip of the iceberg. VISS Technologies is ready with the most advanced customized end to end solutions from security consulting, design to implementation for your community property.
